THURSDAY, FEB. 9th 1939

Number 84

School Concert Held Last Friday at Gordon Church

Trophies Won For Oratory
And Oral Spelling

The entertainment extraordinary featuring school oratorical competitions and oral spelling championships, held in Gordon Memorial Church School Room on Friday evening was fairly well attended. No doubt the cold weather and the ice carnival in Medicine Hat that evening accounted for the absence of many.

Turner's orchestra was in attendance and delighted the audience with their selections. The stage equipment in cream and blue was made at the school by the dramatic class.

The seven dramatic orators entertained the audience for almost an hour with a variety of subjects which they handled exceptionally well.

Fred Zeida Bamforth with the subject "Shadow of the Swastika" won the High School Trophy by a very small margin over Miss May Martin with the subject: "The 1939 Woman."

In the Intermediate school Harvey Bainbridge, with the subject "Japan's Outlook" took the trophy. Other orators were Maiba Shaw speaking on "Canada as a Nation," David Floyd on "Chamberlain's Answer," Florence Bailey on "Living 1000 Years Hence and Beyond," Gordon on "Secret of Success."

The Judges were Mrs. A. R. Bunting, Mrs. W. King, Miss Kane, Mr. B. Thacker and Mr. Jim Brown.

The second part of the program consisting of four spelling contests was highly entertaining from the audience point of view, but must have been quite an ordeal for some of the nervous ones who didn't scintillate quite so well as some of the others.

In the Junior Elementary School Wilma Marty won over Ellen Tonks, Dolores Turner and Jimmie Mackenzie.

In the Senior Elementary School Howard Waters won over Alice Mary Dick Hargrave and Bill Harrison.

SCHOOL NEWS

On Friday, January 27th the Literary Society met in the club room. The meeting took the form of two plays. The grade Ten class gave their version of the play "Poor Maddalena," these taking part were Dorcas Cooke, Flora Stratton, and Kathleen Sheehy. The grade nine class then gave their interpretation of the same play. Those taking part were Florence Bailey, Ellen Cooke and Robert Peterson. Both plays were very well done and enjoyed by everyone.

On Friday, February 3rd the Literary Society met in the club room. The meeting was spent in giving out the Field Day play. The secretary then read the minutes of the two former meetings. The program was opened by Cyril Worts who played a violin solo, accompanied on the piano by Dorcas Cooke. Four girls then sang the "Gracie Song." Next on the program was the school paper which was read by the editor, Dorcas Cooke and May Morfin then closed the society with a duet. The meeting was then closed with a sing-song.

The Intermediate School Trophy was won by Harvey Bainbridge over Donald Hargrave, Cyril Worts and Ellen Johnson. The High School Trophy was won by Zeida Bamforth over Carol Albert, Dolores Buchanan and Kathleen Sheehy.

During the evening Eugene Rose led the school in the singing of songs, and the pupils gave several school yells to encourage the spellers and orators. During the intermission candy was sold and an altogether enjoyable evening was brought to a close with the singing of the National Anthem.

Several Candidates Nominated For Council & School

Election Will Be Held On
Monday February 13th

Nominations for councillors and school trustees were received on Monday morning from 11 a.m. to 12 noon at the Town Hall.

Not for a long time has so much interest been shown in municipal affairs here. Five councillors were nominated to fill two vacancies and seven trustees were nominated to fill three vacancies. The nominees for council are as follows:—

For Councillors:— Joe Hitchen, nominated by Jack Hope and F. E. Broughton; J. N. Dacre, nominated by G. H. Worts and J. W. Campeau; C. G. Buchholz, nominated by A. E. Shaw and H. M. Sangster; R. Rindal, nominated by J. W. Campeau and Ted VanWert; N. R. Willis, nominated by C. Evans and J. Hope.

For School Board:— Bert Allison, nominated by Joe Hitchen and J. Hope; T. E. Balmer, nominated by H. Johnson and J. Hope; H. Johnson, nominated by W. S. Fitzhery and H. O. Johnson; George Bainbridge, nominated by A. Oldfield and H. Johnson; Nels Luma, nominated by J. A. Oldfield and E. C. Venham; Rex Foster, nominated by H. M. Sangster and H. G. Sheehy; A. J. Lamont, nominated by H. M. Sangster and C. Evans.

The election will be held next Monday Feb. 13th, in the East Room of the Town Hall from 10 a.m. to 7 p.m.

Ballots are to be marked with an X opposite the names of the candidates whom the voter chooses for election. On the ballots

Education Week Observ- ed Across Canada

Others Will Make Contribution
At Polling Booth on Monday

This is education week throughout the Dominion. It is an effort to stimulate interest in recent developments and trends in education. The week is sponsored by the Canadian Teachers Federation.

What can we do about it here in Redcliff? One thing we can do is to cast our ballots on Monday for those candidates for the School Board who in our opinion will serve this community best along educational lines.

Most people will agree that the school is in existence for the pupils and not the pupils for the school, just as the state should be the servant of the people, not the people the servants of the state. It is therefore, we believe that the pupils should be the first consideration and that all other things relating to the school are secondary. We should cast our ballots for those candidates who hold this idea.

For Swimming Pool

Keep in mind the Big two day Carnival to be held in the Broadway Store on April 21 and 22. The proceeds will be used to further improve Redcliff's new park. Come with the crowd and help a worthy cause.

For councillors two X's must appear and on the ballots for school trustees three X's must appear. If there are any more or any fewer than just the number required the ballot will be considered spoiled and will not be counted.

Lone Bone Joe's Spinal Column

Well folks here I am again. I just finished readin' the Review. An' I sure was mighty sorry to see the Jimmie Mackenzie dog Cap up and died. From what I've heard Cap was a mighty fine dog and friend to Jimmie, even if he did fit a lot. But I thinners' too that Jimmie must have been awful good to his dog to hev him like him so much. I know that if men was as loyal to their friends as Jimmie and Cap was to eachother, what a swell world this would be. A good friend'll never meak up behind you and nip the seat out of yer pants or steal yer bones. No sir he won't. He's right there when yer in trouble waging his tail or lickin' yer hand or somthin' to show he's yer friend. Ain't I right folks?

I'd sure like to see Jimmie one of my Huskie pups but they're but they're awful wild yet and not used to town folks. Course Jimmie, you must remember sen is gettin' along in years fer dog. An' then you got to think what a swell time he's goin' to hev in the place dogs go to when they goes. You know a cat has nine lives. Well just think all the cats there'll be fer Cap to chase. Nine fer every one here. Gosh won't the fur fly.

Nearly every night I hear a song that is when it sings, a song that makes me laugh and think of the past. It's that song "Gosh, ain't little Dogie". It makes me think of the first time I ever heard that word "Dogie".

It happened like this. I was at the town house of a rancher in the house was right next to a tennis court. I think was built of gray cement blocks. It was on a street called "St. Francis". Wonder who that was after? Well anyways at the house that hot summer day was two girls and myself an' we was talkin' to a man named Arthur Burns who had just come in from somebody's ranch. There was some other folks there but I can't remember just who. One of the girls said to this fellow Burns "How was the Dogies?" He wiped his forehead an' sez "They was all get out."

This sounds awful funny to me an' I sez, "How come cantankerous, that's a funny word to use fer a dogie" I sez. They all looked kind of queer at me and this fellow Burns sez "Joe, he sez 'You know what a Dogie is'?"

"Well I sez I know you smoke 'em" Just as sure as gum on my self "They're Squeakers." Well folks you'd a thought the roof was agoin' off, they laughed at me so much. An' Burns sez to me "Joe, iffen I was to take a good whiff at one of those dogies today I'd be off smokin' fer life. Hev a STOGIE?" he sez an' hands

Treasury Branch Meeting Here on Monday Evening

Treasury Branch Set-Up
Will Be Explained in Detail

A mass public Meeting will be held on Monday evening Feb. 13 in the L. O. O. F. Hall at 8 p. m. for the purpose of explaining to the citizens of Redcliff and adjoining communities, the setup and operation of the proposed Treasury Branch facilities about to be provided in Redcliff. The chief speaker will be Mr. G. L. McLachlan, chairman of the Special Credit Board, assisted by Dr. J. L. Robinson M.L.A. of Medicine Hat.

—Mr. Alex. Maskell will be the chairman for the evening.

Please bring your questions along to be answered. A hearty invitation is extended to all to attend this meeting.

Mayor Hector Lang and Mr. A. P. Burns of Medicine Hat were in Edmonton this week conferring with Premier Wm. Aberhart and several Cabinet Ministers on the matter of the proposed Redcliff - Romaneau Irrigation project.

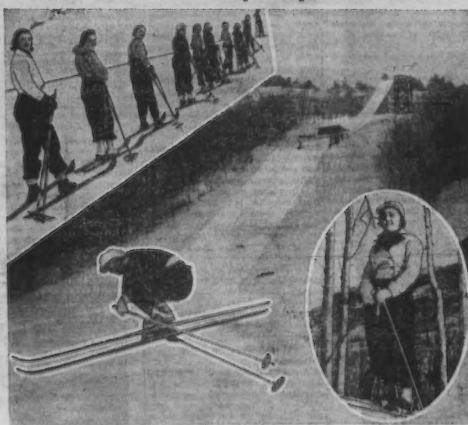

me a seagur must come all of 15c. It must be a month to find out what a Dogie was and my mistake cause nobody would tell me only just laugh when I mentioned it. Gosh I still laugh when I hear that word Dogie.

Things has got a bit snappy up here this past week. Temp. around 65. If you so much as open your mouth to sing a few bars of any song, it just freezes so quickly you can reach up and break off a line of frozen snow an' carry it along with you. If you take it into the snow palace an' get to close to the heat it'll unfreeze an' burn near you to death when you ain't expectin' I've had a notion of puttin' some of my songs on the market by this frozen method. Course I'd have to be careful what kind of songs I sang. Those red hot mama songs sure wouldn't keep any to good. But how about some good old Cow-Boy songs I used to hear sung around your parts thirty years ago. Send me the words of a good old one an' I'll try it and send you down one of my icicle records. You never can tell how an invention like that might 'take an' make a fellow a lot of dough.

Well I hear a ice wren gotten his teeth ready to chew into some of my canned beans. I'm goin' to git real stirred right up one of these days and chew up on them critters. Well see you again next week.

Lone Bone Joe
from Lone Bone Crick

Men's Dominion Ski Championships at Port William

The best skiers of Canada will meet still international competition when the Men's Dominion Ski Championships are contested at Port William, Ont., from February 14 to 16.

The Lakeshore city has everything in its favor in its efforts to sponsor the most successful Dominion championship in the history of the sport in Canada. Not only is the terrain suitable for a meet of such high caliber, but during this year has reached a new peak of popularity and enthusiasm in Port William is noticed.

The contests will be held on Monday, Tuesday, and Wednesday, more than 1,000 feet above the city. Many trails have been cut on the

forested northern slopes where there are good conditions throughout the winter and improvements in trails and competitive facilities make them of championship caliber.

The 4,000-foot, downhill run from the top of Mount Jeffrey is a descent of more than 1,500 feet in less than a mile and provides thrills aplenty for contestants as well as spectators. There is a 90-degree F.I.R. standard jump and a 300-foot slalom course where the continent's ski stars will compete.

The mountains, which is within easy reach of the city, has many nursery and practice slopes in addition to more than 25 miles of

mountain bush trails. Canada's only electrically operated ski tow will be in operation from a sub-house to a 300-foot level. Bugs Edwards, half alpine who has held many championships, is the club's coach. Edwards is seen ascending a perfect icicle-spring in the above layout.

The picture also shows the greatly improved jump where champions of many competitions will try to better the present Canadian record. The young leader in the lower right corner of the picture above is Miss Kathleen Peterson, of Port William, who will be one of the hostesses during the competitions. Other fair ones are seen testing the new ski tow.

The Wheat Problem

Not for the first time has it been said that a more intelligent development of the natural resources, other than those of the **oil fields**, is the **three grain provinces** should be protected, as an aid to their chief industry—agriculture.

With a view to export wheat gradually restricting instead of expanding it, as they should do, to keep pace with the extension of wheat growing areas in this and other countries in recent decades, farmers themselves have been the cause of their own difficulties. In 1919, to protect themselves from the grain growers' problem, various agreements can be reached between the exporters and the farmers.

It is not this date, no export quota agreement can be made effective as between the big exporting countries, the problem of the wheat growers of Canada, who have to be satisfied with the price they receive for their wheat, is to be able to keep reasonable returns for their labor without advertisement and from the government which means.

It is not this date, no export quota agreement can be made effective as between the big exporting countries, the problem of the wheat growers of Canada, who have to be satisfied with the price they receive for their wheat, is to be able to keep reasonable returns for their labor without advertisement and from the government which means.

Coming Closer To Earth

Planet Mars will pass on Saturday, Nov. 7, at 10:30 p.m. It will be 170,000,000 miles from the earth and will furnish one of the most brilliant sights of the year.

Mars will approach within 36,000,000 miles of the earth July 27, Dr. Percival Lowell, director of the Carnegie Institution's Mt. Wilson observatory, said.

On July 27, 1924, it will be directly opposite the earth from the sun. This happens about once in two years.

Despite its close approach, however, Mars will not outshine Venus in brightness. Venus is now at 11,900,000 miles from the earth, nearest it will be this year. It is visible in the southern sky just before sunrise.

Disruption of telephone and telegraph service and short radio telegraph lines will come at intervals due to sun spots and solar eruptions. The sun's corona will be visible in many parts of the sky at intervals.

But the 31-year sun spot cycle has passed its maximum and magnetic storms of the "red" sun will be less frequent than in the past two years.

Four eclipses, two of the sun and two of the moon, will be visible in North America. A solar eclipse will be seen April 10 from far south as the Mexican border. The centre of its path will be across the Alaskan islands and Alaska.

CONFINED ABED BY LUMBAGO

Acting on his principles of "when in Rome, do as the Romans do," a man who has been confined to his bed by lumbago, writes as follows:

"I suffered from lumbago, had for several years, and was confined to my bed. I had treatment, but it did not cure me. I was very much distressed. Why not take Kruschen Salt? Take one or two tablets three or four times a day. You will find relief from that pain in your back. I have been cured. I am now in good health and am working again."

Why is it that lumbago, backache, rheumatism, and other ailments, which cause pain to Kruschen Salt? Because it is a combination of several mineral salts that are vital for your health. It is a natural salt that has an action of its own. Stomach, liver, kidneys, and digestive tract all benefit from it. It is a high state of efficiency.

Clothing From Wood

Says Northern Ontario Has Plenty Of Raw Material

Mr. Peter Hemen, Ontario minister of lands and forests, explained the reason for the lack of clothing manufacturing in Ontario as follows:

"The timber industry in Ontario is the largest in the world. It produces a large amount of pulpwood, which is used for paper. It also produces a large amount of lumber, which is used for building. It also produces a large amount of wood, which is used for furniture. It also produces a large amount of wood, which is used for other purposes."

He explained that the United States 15,000,000 tons of sulphuric acid is produced annually. The reason for this is that the sulphuric acid is used for many purposes. It is used for the production of sulphuric acid, which is used for many purposes. It is used for the production of sulphuric acid, which is used for many purposes.

Packing Radium

More Than Half Of The World's Supply Comes From Great Slave Lake

More than half the world's annual production of radium passes through the laboratories of the Bureau of Research Council on its way to market—but no one gets very excited about it.

Measuring hundreds of thousands of dollars worth of the powerful mineral is just one of the many jobs accepted as casual routine by the council's experts. Each month 3,000 or 4,000 milligrams of radium (worth about \$25 a milligram) are handled in a couple of unimpressive little rooms containing only a few small tables, electrometer and instruments.

More than half the world's annual production now comes from Eldorado Mines on Great Slave Lake, developed since 1900. The rest comes from the Belgian Congo. The pitchblende mined at Eldorado is refined at Port Hope, Ont., to extract the radium which is sent to Ottawa for testing and measuring.

The radium comes to the council laboratories in the form of a dark gray powder contained in glass ampoules. These are packed in heavy lead blocks for shipment. The council job is to determine whether the blackish powder is really radium and how much of it.

To do that, a small tube of the powder is placed before an electrometer by which ionization of the air caused by rays from the radium is measured, indicating the quantity of radium present. This ionization is the breaking down of atoms in air into positive and negative ions. The flow of these ions in an electric field indicates the strength of the rays which do the ionizing.

The amount of the unmeasured radium is determined by comparing the amount of the ionization produced by it and by a known quantity called "the standard." A certificate is then issued by the Research Council as to the amount of radium in the tube.

From the council laboratories the radium goes to a platinum smith where it is put in small platinum tubes known as radium needles. These are pointed to the ends and have an eye like a needle at the other, to facilitate handling by tweezers. These needles contain from one to 10 milligrams. Quantities as large as 20 milligrams are used in a small number of cases while occasional quantities larger than that are placed in a "radium tube."

These are all measured again for the purchaser's protection, usually by the National Research Council authorities and occasionally by the United States Bureau of Standards or national laboratories in other countries—Ottawa Journal.

Giant Palm

Believed To Be The Oldest Living Thing On Earth

The oldest living thing on earth, a giant palm which is believed to be 15,000 years old, has just been reported by 700 biology students of the University of Chicago.

The tree was uprooted by vandals recently. Known as "Grandfather Peter," its age was verified in 1912 by Prof. Chamberlain, of Chicago, the world authority on the Macraemian, as these palms are called. He was surprised to find the largest and oldest living specimen in the grove growing in their wild and natural state on the "Tambora" mountains in Queensland, Australia.

The professor estimated that "Grandfather Peter," the largest of the trees, was 15,000 years old. It stands 25 feet high. The others in the grove varied in age from 3,000 to 8,000 years. These palms—they are not strictly speaking trees but a cross between a fern and palm—grow exceedingly slowly. The fern-like leaves are six to seven feet long, fifteen inches wide, rigid, and beautifully green and glossy. The palm bears a huge seed cone, not unlike a pineapple, and one was found to weigh 85 pounds.

The seeds from it were all planted and to-day a very small plant of the Macraemian Denham can be found in each of the 151 national parks in the United States.

It is hoped that "Grandfather Peter" will survive the attack of the vandals and the transplanting.

"Could you help a poor man who has just come out of a hospital?" "You should be thankful to own it." "I didn't own it, mum. I was only a lodger."

Only one in every 145 persons considered for lunacy is executed, according to estimates.

Many German trading companies are opening Manchukuo branches.

Staging A Comeback

Photograph Has Been Improved And Sales Are Increasing

Photographs are coming back. Since 1912, says the *Illustrated London News*, the sale of records has gone up 500 per cent. The very radio which once changed the household entertainer into the attic is now leading a newer and more efficient photograph in by the front door. So comments the *Watsonian*, N.Y. Times.

Undoubtedly the establishment of the radio where good music could be had without the purchase of records had convinced many that the photograph had gone to its long home. But the absence has been merely temporary. And as the radio became perfected the photograph was benefiting from the same improvements. Simultaneously there grew up more careful recordings for the photograph discs. Electrical devices were substituted which did away with the old hand wind up. On more expensive machines even the records were made self-changing.

Thus the instrument which to-day records the household in easy, pleasant, agreeable to listen to, and, pleasing to behold. Competition had been made of necessity, not an enemy, but a benefactor.

Menace On The Highway

Old Cars Should Pass Inspection Before Being Allowed On The Roads

Either the automobile should undergo a mechanical examination before they are allowed on the road, or their owners should be able to guarantee financial responsibility. In making this suggestion, Magistrate Hanning is absolutely correct.

He has only to examine the case which elicited the magistrate's observation of appreciate the justice of his remarks. A man bought a car for \$25 and the very next day was in an accident involving three automobiles, injuring eight people, one of whom had to have a leg amputated. The car in question carried no insurance.

The law is, in respect to such cases, hopelessly inadequate. No punishment imposed on the driver of such a car; can make up for the damage he may cause to property and person. There is nothing unfair in asking the driver of an ancient vehicle—or any other car—to secure authorities in case of accident. Better or later public opinion will demand such legislation, and the sooner the better.—*Windsor Star*.

Idea Proved Profitable

Pastor's Plan For Fate Pending In Reverse Worked

Rev. Grant Robinson counted a profit of \$475 from his "palm-reading in reverse" experiment and commented "my faith in human nature has been fully justified."

Episcopal church in Walton, N.Y., he had the collection plate passed out to each member of the church congregation and urged each to take a dollar bill, invest it and return it to the church.

The members took \$127 and on January 8 they returned this sum to the church. Mr. Robinson said he will pay for the winter's coal at the church.

The members employed a varied program in which to invest their dollars. Some made candy and pillow slips, other made hats and cakes and some used the money in their businesses and on their farms.

The pastor, himself, participated in the plan and said he realized a profit of \$18 by giving lectures.

Challenge To America

Expansion Of Military And Foreign Air Fleets Is A Menace

The National Advisory Committee for Aeronautics warned the United States Congress that "feverish" expansion of military and commercial air fleets by foreign nations was a challenge to America's aviation.

The committee, which does research work in the science of flying, recommended setting up a laboratory to experiment with airplane structures.

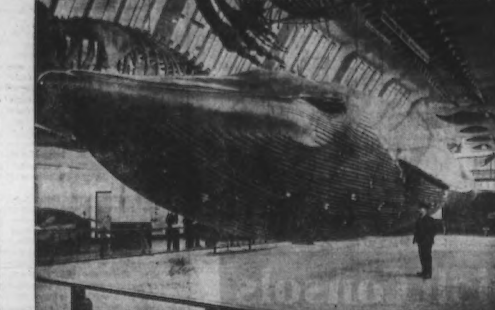

"It is not only good policy from a financial standpoint," its annual report said, "but also vital from the standpoint of national defense, that American aircraft have a performance equal or superior to that of a potential enemy."

"More number of aircraft, however, are not in themselves sufficient" for an adequate modern air force. It is of even greater importance that the aircraft be of the most effective design.

Democracy must be the rightmost state. Nothing was wrong or wicked ever required so much saving.

White blackbirds frequently occur—the result of albinism.

REMARKABLE LIFE SIZE MODEL OF WHALE IN THE BRITISH MUSEUM

This picture was taken in the Natural History Section of the British Museum in London and shows the model of the Blue Whale. Features of interest are the great size of the head, nearly a fifth of the total body length; the eyes just behind the angle of the mouth, and the very small ear opening a little distance behind the eye.

Uncanny Instinct

Birds Have Learned To Keep To Safety Of Shallow Preserves

(By IRL J. MILLER)

Proof of the marvelous instinct of direction possessed by birds is found at the Jack Miner sanctuary, which has only to be visited to be convinced on the map of the continent, yet this fall, as at all other times, is drawing bird watchers back from far reaches of the country.

Canada's great naturalist, expert, and as he is in the ways of wild creatures, even to-day marvels at this uncanny talent which enables feathered creatures to find their way back to the sanctuary year after year. Various species of birds go as far north as Hudson's Bay and even into the Arctic Circle, and on their southern flight get down to the Louisiana marshes and the Gulf of Mexico.

Miner points out that if a man were dropped at the North Pole without a compass, but with proper clothing and food, he would stand little chance of finding his way back to his birthplace in the civilized world.

"Man depends on an instrument known as a compass, while the birds depend on their brains and God-given knowledge," Mr. Miner said. Robins, mourning doves and many song sparrows have been tagged at the sanctuary, and they have returned to the same place to nest time and time again, he said.

The Premier Of France

The French Premier, M. Daladier, is one of the mildest of men, having no more dashing hobbies than cycling and bowls. His fortunes and those of his family were established in a small bakery. While his sister ran the bakery for him, M. Daladier attained eminence. The sister still keeps house for her widowed brother.

Husband—You only married me because you thought I had a little money.

Wife—That's unfair. I'd have married you just the same if you'd had lots.

Father (to daughter's suitors): "My daughter shall never marry a fool!"

Suitor: "Ah, you don't want her to make the same mistake as her mother did!"

Flying In Australia

People Are Taking Readily To This Mode Of Travel

Figures issued by the civil aviation board show that Australians are taking readily to flying, and that the Commonwealth's sensational desire to flying has made it the fifth country in the world in commercial aviation. The statistics merely record the facts about Australian flying, but comparison with the figures published in other countries shows that only the United States, in the British empire as a whole, in Germany and in Italy was there more passenger flying last year than in Australia during the year ended July 31, 1932. Passengers carried by Australian airlines jumped by more than 100 per cent. on the previous year's total, which was itself double that of the year before. Experts give the credit for the advance to airline operators' foresight in increasing schedules and using fast and comfortable planes—*London Sun*.

Housing Loans

Indications Of A Large Increase In Building For 1933

A bright future in 1933 for the National Housing Act was forecast by Hon. Charles Dunning, minister of finance, as he announced loans under the act in December amounted to \$1,241,274 to bring the total of all loans up to Dec. 31 to \$27,678,000.

"There is every indication of a very large increase in the volume of lending activity during 1933," said Mr. Dunning. "It is apparent that the act is producing the results we had hoped for. During the last four months of 1932 new loans approved aggregated \$2,491,000, although they were unfavorable building months."

Unfavorable Plane

Hugh F. Burton, rancher of Richgrove, Cal., believes he is the pioneer in a new field of aeronautics. He is a farmer and rancher of the United States. He has installed a hangar for his airplane which he regards as an essential part of any modern up-to-date farm or ranch.

Gentleman (to newboy): "Don't you feel cold, my boy?"

Boy: "Oh, no, sir, selling papers keeps up the circulation."

CANADIAN COW SETS NEW RECORD FOR MILK AND BUTTER FAT

Dropdown Johanna Changling, owned by Douglas Hart of Woodstock, Ontario, has broken both the Canadian and American 305-day records for milk and butter fat production by a considerable margin. The 305-day lactation, which began on June 1, 1932, ended on May 31, 1933, with a total of 2,895 lbs. of milk and 279 lbs. of butter fat. She also completed a 305-day record during this lactation of 27,000 lbs. of milk and 971 lbs. of fat with average test of 3.6%.

In The Right Hands

Wealth As Lord Nuttall Uses It Is Bleeding To Machines

Lord Nuttall takes some of his comfortably sane view of wealth that he must be a delightful man for income tax assessors to handle. After all, as he points out, the richest of men can wear only one suit at a time and eat only one meal a sitting. His lordship, however, may be reminded—not regretfully left as a casual afterthought—that the man of means has this double advantage over the man without means—he may have as good a suit in reserve for high days and holy days, and he is in a position to ensure that the meal is a square meal and entirely to his liking. Few of us are able to appreciate the virtue of poverty; those who have experienced it appreciate it least of all, and it has often been observed that the nice people who commiserate their retreating qualities have, in most cases, taken particular care to admire it at a distance. This wealth for its own sake is a commendable pursuit for either males or sinners. There is a happy mean to which most of us would subscribe. Hence expressed it is, "No for to hide it in a bank, Or for a true attendant."

But for the glorious progress of being independent.

This wealth, however, does not blind us to the fact that superabundant riches in the right hands may be an incommunicable blessing to mankind. Lord Nuttall is himself a shining example of this truth. He is not the greedy lord of a rich vineyard, but the steward of good lands, one to whom a great trust has been committed. This is the principle that underlies the real "giving" from the widow's mite to the millionaire's tens of thousands—Bon Accord, Aberdeen, Scotland.

No Official Record

As To Whether Raleigh Or Hawkins Introduced Tobacco Into England

It is curious that considering the adventurous career of Sir Walter Raleigh, his part as a soldier and explorer, and his part as a statesman, there is no official record of his introduction of tobacco into England.

It is curious that considering the adventurous career of Sir Walter Raleigh, his part as a soldier and explorer, and his part as a statesman, there is no official record of his introduction of tobacco into England. Raleigh's great fame as a gallant who spread his cloak in the mud to save Queen Elizabeth's shoes, and his distinction as a writer, only within the past few days has a status to his name. Raleigh's name and his distinction as a writer, only within the past few days has a status to his name. Raleigh's name and his distinction as a writer, only within the past few days has a status to his name.

Netted musicians were quick to disagree.

The noted pianist Mark Hambourg replied hotly:

"Sir James' statement is absolute nonsense. He is a very eminent scientist—but his stick to his science. Delicacy of touch is all a matter of muscular control. It is impossible to get it other than through fingers."

Quoted in The Drying.

An ether called up a sergeant and spoke of the unsoldierly appearance of a recruit.

"He looks very slovenly, sergeant."

"Yes, sir."

"Are you sure he washes?"

"Yes, sir."

"Absolutely certain he washes?"

"Yes, sir, but dries a bad color, sir."

"Things seem familiar. Do you neighbor borrow much from you?"

"Borrow? Why, I feel more at home in their house than I do in my own."

British Columbia Lumber

British Columbia lumber is steadily gaining in favor in South Africa, and seems to have attained its assured place, according to Mr. J. L. Mutter, Canadian Government Trade Commissioner at Johannesburg. In 1932, British Columbia shipped 45,000,000 feet of lumber to South Africa in 1937, worth \$17,000,000.

Interesting

Local Items

Be sure to mark your ballot
correctly. A spoiled ballot will
not help to get your candidate in.

Mrs. F. Ritt was the hostess
at an enjoyable afternoon tea on
Wednesday.

Mrs. L. Lewis is spending a
few weeks at the home of her
parents at Melville, Sask.

Mr. J. A. Mackenzie and Mr.
N. W. Meldrum are taking part
in the hospital being held in Medi-
cine Hat at present.

Have you stored your ice for
next summer? The ice crop is
good this season, so cut your ice
while the sun doesn't shine.

Mr. Norman Meldrum returned
Sunday night from Saskatchewan
where he had on business for the
Dominion Glass Co. He left
Thursday for Calgary to attend
the Dairy Convention in that city.

Mrs. F. M. Fraser, of Staveland
Alberta, has been elected as
Mayor of that town. At present
she is the only lady mayor in
Canada and only one other
woman was ever a mayor in
Canada.

Where has our lovely mild
winter weather disappeared to?
For the past week the thermometer
has hovered around the zero
mark and the freize is the most
attractive spot. This morning the
thermometer took a nose dive
and brought up at 48 below zero.
We have just learned from Geo.
Hope that, tonight, it will be the
coldest night in the history of
Canada.

In order to feel a little warmer
these cold days let's think of the
fine bowling green the local Leg-
ion is planning to make this sum-
mer. Or we might let
ourselves visualize the pleasant
picnic suppers we are going to
enjoy in the shade of the trees in
the New Park or the refreshing
dips we will be wanting to take in
the Swimming Pool on those sultry
days which are sure to come.

"Canned Sunlight"

IT is interesting to note that
for centuries chemists en-
gaged in scientific research
have looked to the day when
sunshine rays would be
trapped and harnessed by man.
In the eighteenth century,
Joseph Addison wrote a hu-
morous story of an English-
man who bottled Sunlight as
one would preserve fruit.
To date, no one has succeeded
in "canning" sunlight, but
there is a machine in the
EATON Research Bureau
called a Fede-Chamber which
produces a light that prac-
tically duplicates the effect
of sunlight in its action on col-
ored materials.

Such statements as "sunfast"
or "sunworthy" in EATON
advertising are based on the
results of experiment by tech-
nicians working with a Fede-
Chamber. Woollens, Silks,
Rayons, Wallpapers and many
other products must stand up
a test of from 48 to 144
consecutive hours of this
"canned sunlight" before we
will refer to them by these
terms in our Catalogue.

When you buy merchandise
from EATON'S with speci-
fic guarantee of ability to
resist ravages of the sun, you
can buy with complete con-
fidence.
